

Turning and milling

We have a Europe-wide network of qualified companies for CNC milling, turning and grinding. Our machines and designers make it possible to manufacture even the most demanding production parts.

Our promise to you: We will solve your production problem.

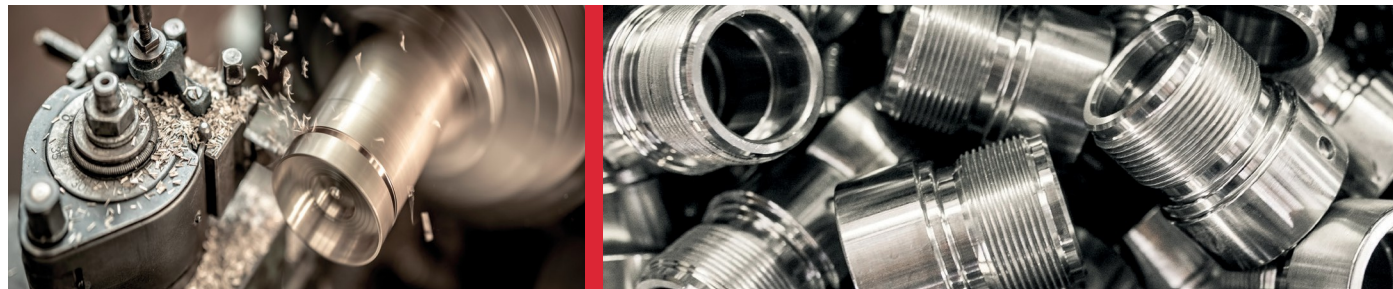

As a rule, we use 3-, 4- and 5-axis CNC machines. However, 6- and 7-axis machines are also available in our network and can be utilised on request. We can supply high-quality metal or plastic milled parts in quantities ranging from one prototype to hundreds of thousands. We are also happy to produce laser, sintered and 3D printed parts for you.

Project and school planning

Whether it's a training centre, a company training workshop or the planning of a complete school facility - we are your partner for complete solutions. Whether conventional or CNC-controlled, we supply German brands in turning and milling, bending, laser and cutting technology, soldering stations and much more in the industrial training sector.

We work with you to plan the entire workshop according to your wishes and requirements. Contact us and we will be happy to send you information material on our reference projects.

C-Parts KANBAN

Our portfolio encompasses a wide range of fasteners and fastening technologies. Our C-parts management services are another important pillar of our company.

Here we can help you to organise your material procurement even more efficiently and cost-effectively.

Complete solutions in the KANBAN area: We not only supply screws and special procurements of all kinds, but also customised goods in any packaging size. Various automated solutions through to delivery to your production line are our well-known strength. We ensure your supply and process security, reduce procurement costs and minimise costs and the potential for error

Standard parts and electrical

Today, requirements are placed on production techniques that can be met by using high-quality and proven components in tool and equipment construction. In toolmaking in particular, the use of standardised components is often the only way to guarantee the desired short development and delivery times.

In order to fulfil our customers' quality requirements, we work closely with the market leader Eldracher SL. Our Spanish partner offers the whole variety of the market in the field of standard parts, ejectors and punches, springs and jet cooling. Please do not hesitate to contact us, we also manufacture 3D drawing parts for mould making according to your requirements.
